Acknowledgements

- Many thanks to the Farm Managers, Jon Hummel (Newark Experiment Station) and Brian Hearn (Georgetown, Carvel REC) and their crews that maintained the plot areas for us, including soil preparation, spraying, irrigation, etc.
- Thanks to Ms. Cory Gregory for lab assistance and data entry.
- Ms. Alyssa Collins for lab assistance during the soybean rust effort.
- Dr. Cory Whaley, Sussex county Ag agent for maintaining the Syngenta Spore Trap for soybean rust
- Sridhara Kunjeti for his efforts at raising and maintaining downy mildew inoculum
- Thanks to Ed Kee and Emmalea Ernest for their input on lima bean production and harvesting.
- Delaware State University for a sentinel plot at the Smyrna Outreach and Research Center

The enclosed reports are a compilation of the plant pathology experiments conducted in Delaware during the 2007 growing season. The data presented in these reports are not to be used as disease control recommendations. Some of the fungicides or varieties tested are not currently labeled or available commercially. Contact your local Extension office for current information on disease control recommendations.
